

SODIC. reduces operating costs and improves operating efficiency

Faster and more accurate completion of projects

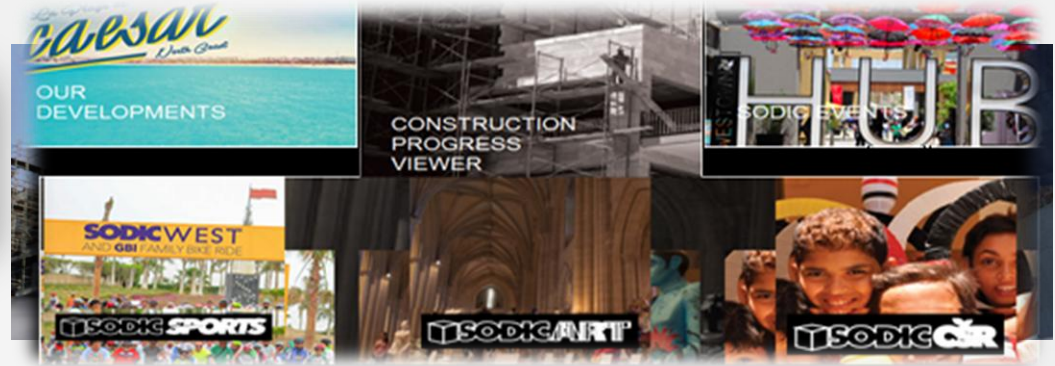

by helping to avoid documentation errors that can result in costly project delays

Saved time for documents distribution

by automating the loading of acquired-company data directly into the IBM solution

Solution components

- FileNet Content Manager
- FileNet WorkplaceXT
- Java Technology

Business need: Over 100 people were accessing information daily from Letters , Transmittals, Submittals , RFIs, to invoices. The company sought a solution that lowered the cost of providing dependable, timely information to staff members, consultants , contractors and suppliers. It also wanted to limit risk by reducing the amount of transient information stored in email and network file systems.

Solution: Prosoft Information System. adopted a solution, which is built on FileNet Content Manager platform. The configurable business applications automate engineering document creation, editing, review and distribution process. Helping to ensure consistency of information across different projects and locations and improve control of content provided to consultants, contractors, and suppliers.

"We have stringent requirements for managing documents and information. The IBM solution provided governance capabilities on the information across all SODIC projects, furthermore the simplicity of information distribution."

Mr. Tarek Barakat, Document Control Manager, SODIC.
